- ✓ Orders shipped same day
- ✓ Guaranteed Quality
- ✓ Free Film Samples

ImageTek-B

High contrast, rapid exposure, rapid processing X-ray film. This fine-grain film uses the latest "anti-crossover" emulsion technology for superior diagnostic clarity. ImageTek-B can be exposed in blue emitting rare-earth screens for an 800-speed system or in calcium tungstate screens.

ImageTek-H

A half-speed, high contrast, high resolution film. Featuring "anti-crossover" technology, it is specifically designed to provide exceptional reproduction of film detail and low quantum mottle. ImageTek-H can be exposed in blue emitting rare-earth screens for a 400-speed system.

ImageTek-G

High contrast film featuring the most advanced "lamina crystal" and "anti-crossover" technology. Lamina crystals are specially shaped to allow a larger amount of light to expose the film, resulting in maximum detail visibility and smooth, low noise images. ImageTek-G can be exposed in green or blue/green emitting rare-earth screens for a 400-speed system.

TrueLite^{Plus}

Lightweight replacement for "regular lead" at no additional cost.

- Equal or lighter in weight when compared to most other "lightweight" aprons.
- Equal to 0.5mm Pb. at 100 kVp

ECONOMY

Economically priced—same high quality as our Standard, with 1" ties. Adjustable back ties keep apron snug. 0.5mm lead equivalent (collar optional).

PA-010 TrueLitePlus

DELUXE

Front protection with choice of adjustable 2" buckle or velcro belt which crosses the back for a comfortable fit. Adjustable straps at shoulders keeps apron snug. 0.5mm

PA-012 TrueLite Plus

PATIENT APRONS
All 0.5mm protection. Velcro belt closure. PAHA TrueLite Plus
