

Kane Environmental, Inc. is an environmental consulting company based in Seattle, Washington specializing in environmental due diligence, investigations, and site cleanups. The high number of our return and long-term clients demonstrates our reputation for fast turnaround, high quality work, and commitment to excellent customer service.

Kane Environmental's Seven Core Services:

Phase I Environmental Site Assessments: Providing ASTM Phase I ESA reports for clients purchasing, selling or refinancing real property for single or multiple acquisition projects throughout the United States.

Phase II Investigations Uplands and Waterfront Property: Soil, groundwater, surface water and sediment investigations to determine the presence or absence of contamination from either on-site or off-site sources.

Indoor Air Quality Investigations: Sub-slab and ambient air sampling to assess indoor air quality for residential, commercial and industrial properties.

Environmental Engineering and Remediation System Design: Expertise in soil vapor extraction, groundwater sparging, bioremediation/natural attenuation, and other remediation technologies. We also provide remediation system design, pilot testing, system implementation and compliance monitoring.

Hazardous Materials Surveys: Asbestos/lead-based paint and mold surveys for residential, commercial, and industrial properties.

Remediation/Construction Technical Oversight: On-site project management during remediation activity including soil excavation, installation of remediation systems and on-going operation and maintenance of remediation systems.

Geotechnical and Slope Stability Surveys: Subsurface investigations for commercial building foundations and determination of steep slope integrity.
