

Intelligent Energy Management

When it comes to saving energy in both new and existing shelters, our building consultants are downright stingy. With more than 100 years of combined HVAC experience, they understand the advantages offered by air-to-air heat exchangers, high-efficiency air conditioners and energy conservation control systems. They know the effect that high-efficiency construction products such as insulating foam, embedded exterior coatings, vapor barriers and reflective roof materials can have on lowering energy costs and extending shelter life. And their in-depth knowledge of renewable and alternative energy sources, including solar array and wind turbine technology, is taking advanced conservation solutions to the next level.

Applying their industry experience, technical expertise and proven track record of performance, our trained specialists take a comprehensive approach to arriving at energy management solutions designed for new and existing shelters. This process includes a careful evaluation of each project to arrive at customized energy conservation solutions that achieve the maximum return on investment at an affordable cost. Learn more about our Intelligent Energy Management options by visiting the Thermo Bond Building Web site at www.thermobond.com.

Strong, Integrated Customized

Equipment shelters, designed, built, wired and on-time for your equipment needs.

At Thermo Bond We “Get It”

For more than two decades, Thermo Bond Buildings has been dedicated to the familiar proposition: **Whatever the customer wants...the customer gets.** That’s because at Thermo Bond Buildings we “get it.” We get that it’s not enough to provide quality equipment shelters and custom cabinets. That’s why we back our quality workmanship with fast, friendly and personalized customer service, flexible integration capabilities and dependable on-time delivery.

The Thermo Bond Value Foundation

Our entire corporate culture is built upon the principles of the Value Foundation. This value system is our assurance to customers that their equipment shelters and cabinets will be professionally designed and customized by the best technicians and licensed electricians in the business.

Shelters

Thermo Bond equipment shelters are constructed to customer’s specifications and shipped fully assembled, including lights, outlets, air conditioners, heaters, generators, transfer panels, ventilation systems, cable ladder, grounding systems, etc. Shelters are available in sizes ranging from small (4’ x 6’) to large (24 x 42) (w x l).

Cabinets

Thermo Bond Custom Cabinets are designed and built exactly to customer specifications. Just a few of the features we offer include:

- Custom sizes, colors and logos
- Air conditioning and ventilation
- Lighting
- Generator Receptacle

Integration

Thermo Bond will procure and install whatever specialized equipment a customer specifies, including:

- Relay racks and distribution frames
- Fiber electronic equipment
- Grounding, power systems
- Alarm Cabling, Protector blocks
- Much more...

Customization

With Thermo Bond, customization is a simple process where we match the design to your needs. The size and shape of each Thermo Bond Building and Custom Cabinet is primarily based upon its intended function or purpose and variable factors involving what goes where and how little or how much customization is required.
