**Energy-efficient ambient
lighting, together with
task and personal task lights**
provides even, balanced office
illumination that controls light
distribution, minimizes glare
and reduces eye strain.

task

Task lights from Light Corporation

help take the 'work' out of workspace. Task lights minimize glare, reduce fatigue and improve productivity by putting light where you want it, and they're versatile enough to fit any office layout.

personal task

Personal task lights are a matter of style and choice and **no one offers more stylish choices than Light.**

From wall mounts to desk mounts to freestanding, our personal task lights bring a personal touch to a sometimes impersonal workspace.

ambient

Ambient lighting from Light provides a blank 'canvas' which is complemented with task and personal task lights to provide a complete office lighting picture.

What is 'green'?

Consider green. It's a **soothing, calming color** that's easy on the eyes.

It's the color of the **environment.** It's the color of **health and safety.**

It's the color of **clean, efficient growth.** It's the color of **life.** It's the color of **money.**

At Light Corporation, we produce lighting that's **calming and easy on the eyes.**

Our manufacturing and disposal processes are **environmentally friendly.**

Our products help promote a **healthy, efficient, and productive workspace.**

We bring light to **life,** and we save you some **green.**

Elements of 'green' lighting

Lighting from Light Corporation doesn't just illuminate the workspace, it enlightens it as well. **Light products are designed to create an inviting space that people can enjoy and feel good about.** By striking a balance between maximum light distribution and minimum glare, our lighting creates conditions under which **creativity and productivity can flourish.**

But at Light, 'green' goes farther. To promote energy efficiency we use advanced fluorescent lamps, electronic ballasts and other innovative options such as occupancy sensors which turn lights out in unoccupied offices.

Ongoing ISO-9001 registration is your guarantee that **our products are manufactured to high internal standards** while our ISO-14001 registration ensures that **our manufacturing processes and company policies are environmentally sound.** Even our products themselves are made with an eye toward recyclability.

There is a case to be made for responsible energy use and Light is making it.
